

Series 96201, 96211, 96221

Description

The Series 96201 Pressure Switches offer a durable and versatile solution to your pressure control problems in a compact, economical package. A wide range of factory options is available in plastic, brass or stainless steel, allowing the switch to be custom configured to the exact needs of your application. With the addition of an optional conduit connector, the switch becomes watertight and bears a NEMA 4 rating. The addition of optional DIN electrical connector allows for ease of installation and maintenance. Designed to control pressures from vacuum up to 7500 psi, the Series 96201 Pressure Switches are an outstanding choice to meet your demanding industrial applications.

Technical Specifications

Model (Decreasing psi-bar) - (Increasing psi-bar): {96211-BB1} 2.5-15 psi (.2-1 bar)

Fitting Option: Brass (Standard)

Electrical Connectors: {-T4} 1/2" NPT male conduit connector with free leads

Diaphragm/O-ring Material: Buna-N (Standard)

Ordering Information

Part Number: 96211-BB1-T4

Lead Time: Typical lead-time will be 15 to 20 working days (Lead-time is estimated for quoting purposes only. Actual lead-times will be determined at time of order. Barksdale will always strive to meet your delivery expectations)
